Treatment unit for
severe burns patients

We set standards – including when treating severe burns patients

MEDIS Medical Technology GmbH has 35 years of experience in developing and producing innovative high-tech medical products and has set standards with its patented systems time and again.

In the last few years, we have used our specialist expertise to help severe burns patients. With highly functional treatment units for acute treatment and hydrotherapy, tailored to the needs of patients and users, we allow optimum patient care and safe and efficient handling for users.

Providing the best possible patient care and maintaining a good business approach do not have to be a contradiction. A treatment unit for severe burns patients, designed and produced to a high quality by us.

The ideal solution for patients and medical staff

All our treatment units are designed individually for burn centres and we are in close collaboration with the users. Every unit is different – the compo-

nents used are tailored specifically to customer requests, internal structures and processes, and structural features.

Treatment unit for initial care and (hydro)therapy for severe burns patients

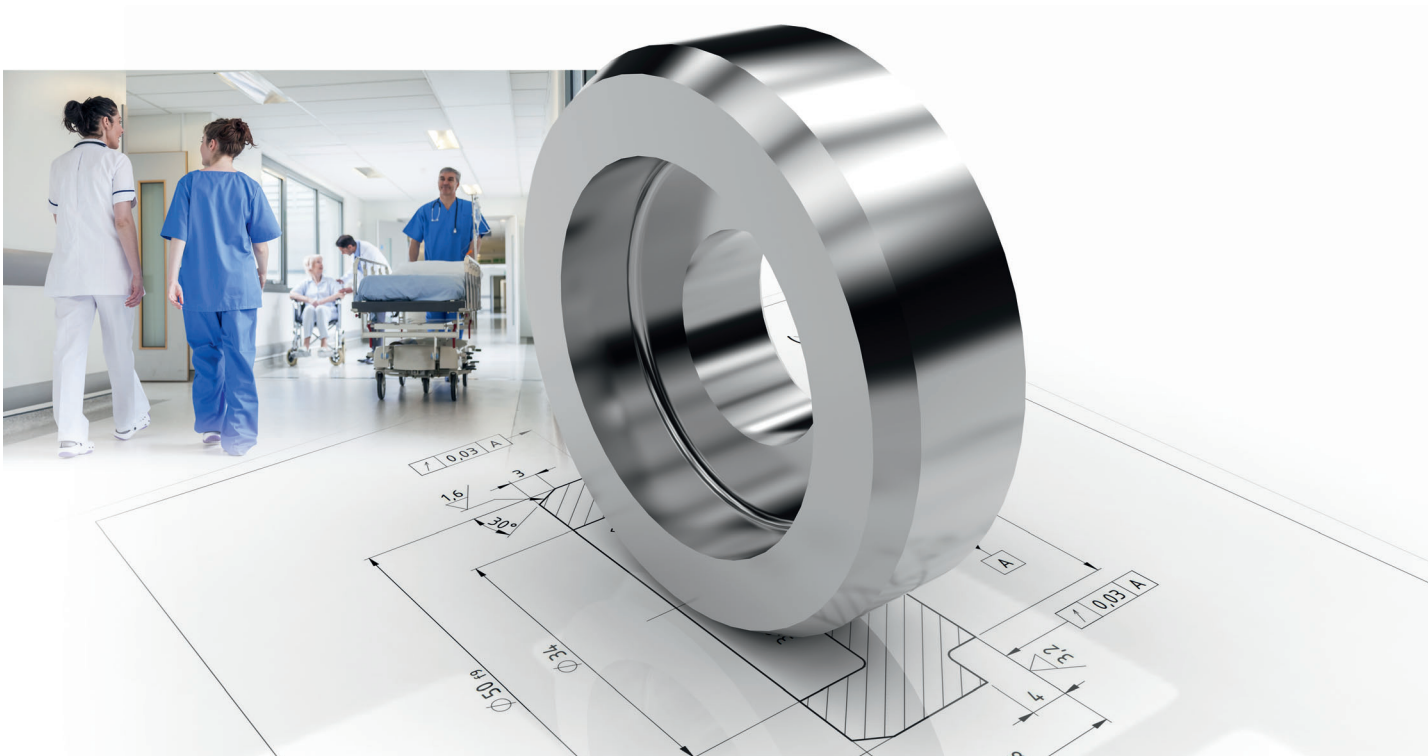

- Dimensions, shape, arrangement, configuration etc. are entirely based on customer's wishes
- Components: Tub, bed, control cabinet, software/programming, soft positioning systems on request
- Material: Stainless steel, premium craftsmanship
- Quality made in Germany
- Mobile bed with adjustable height independent of tub
- Easy cleaning and disinfection
- Ergonomic working (working height etc.)
- Safety functions such as overflow and scald prevention
- Intuitive operating software
- Maximum load for bed: 300 kg
- Class I medical product (corresponds to the provisions of the EU Medical Device Directive 93/42/EEC, amended by 2007/47/EC, and meets the applicable directives and specifications of the DVGW)
- Labelling with the CE mark

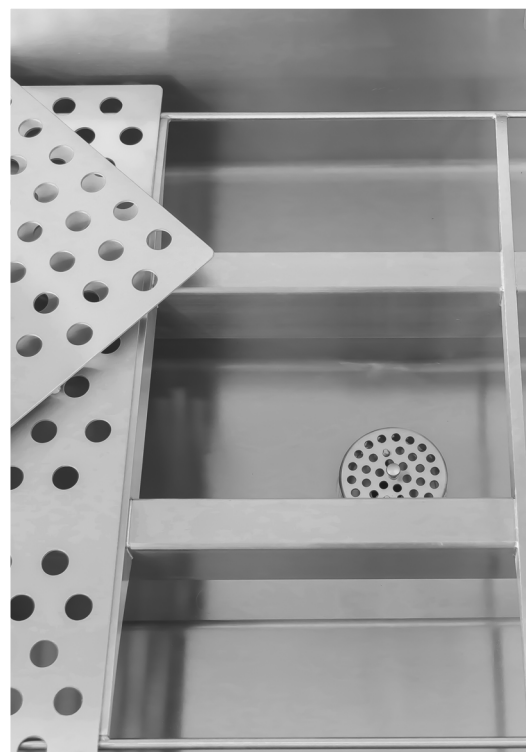

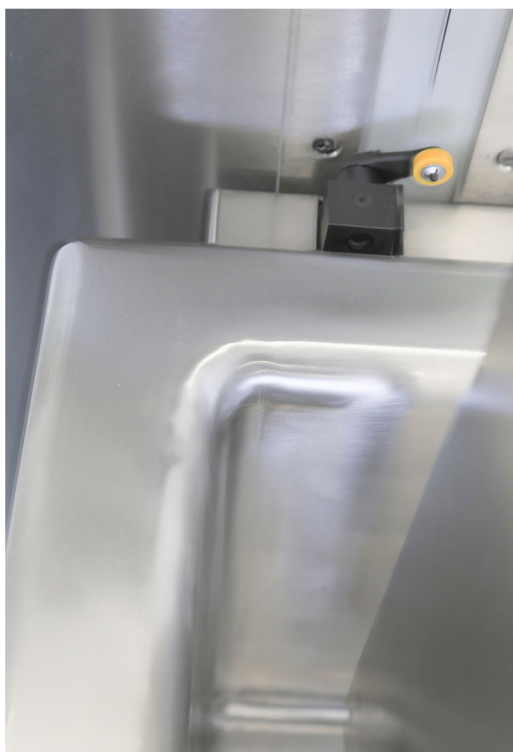

All-round care for our customers

There are only a handful of treatment units for severe burns patients worldwide. With our extraordinary vertical range of manufacture, we are able to offer you individual treatment units. Our experts have particular expertise and turn

your requirements into tailored technical solutions. From design engineering and programming to final assembly on site, every step is conducted by our qualified specialists.

- Intensive, individual consulting
- Measurement on site
(construction site or existing building)
- Creation of templates based on customer requirements
- Detailed planning by our experienced design engineers
- Design engineering, production and programming at our sites in Germany
- On-time delivery and assembly
- Careful instruction for users
- Support from our staff
(with service partners worldwide)
